

From interviews to a PivotTable: a practice activity

You will code six short interviews in Taguette, export them, split the data in Excel, and build PivotTables that show what the participants said. Every step is numbered, with pictures of the real screens.

6 interviews 11 tags 45 statements to code about 2½ hours

Taguette 1.4.1 and Excel 2016 or newer

Online version, with the file downloads and the practice PivotTable:
<https://michaeltup.github.io/Taguette-Excel-Activity/>

Before you start

You need a Windows computer with Taguette 1.4.1 installed, and Microsoft Excel. Work with a partner if you can: one uses the mouse, the other reads the steps aloud. Tick each step in the margin as you finish it.

Part 1 about 10 minutes

Read the study first

Know what the interviews are about before you open any program. The software is easier when the content is familiar.

The study

Balancing Work and Graduate Studies: Experiences of Teacher-Graduate Students. Six public school teachers who are also taking graduate studies were interviewed. Three are taking a Master’s degree and three a Doctoral degree. All of them are hypothetical: this is practice data written for this activity.

The participants

Code	Program	Sex	Age	Position	Years teaching
S01	Master’s	Female	26	Grade 4 teacher	3
S02	Doctoral	Male	45	Grade 10 teacher	15
S03	Master’s	Male	29	Grade 9 teacher	5
S04	Doctoral	Female	48	Master Teacher	18

Code	Program	Sex	Age	Position	Years teaching
S05	Master's	Female	24	Kindergarten teacher	2
S06	Doctoral	Male	51	Head Teacher	22

The four interview questions

1. What is your biggest challenge in balancing your teaching job and your graduate studies?
2. Who or what helps you the most?
3. How do you cope when the workload becomes too heavy?
4. What would make it easier for teacher-graduate students like you?

The transcripts

Tap a name to read it. You will download these same files in Part 2.

▼ S01_Masters_Female

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S01: Time is my biggest problem. I teach the whole day, then I travel to the university for my evening classes, and I still have lesson plans to finish. Sometimes I am so tired that I fall asleep while reading my assignments. Paying for my tuition is also hard because I am still paying my first loan.

Q2. Who or what helps you the most?

S01: My mother helps me a lot. She cooks for me and reminds me to eat. My classmates also share their notes when I miss a class.

Q3. How do you cope when the workload becomes too heavy?

S01: I make a weekly schedule every Sunday. I write my deadlines in a notebook so I do not forget anything.

Q4. What would make it easier for teacher-graduate students like you?

S01: It would help if some classes were online, so we do not need to travel after work. A scholarship for young teachers would also be a big help.

▼ S02_Doctoral_Male

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S02: Finding enough time is the hardest part. Between teaching, checking papers, and writing my dissertation, the hours are never enough. I also feel guilty because I spend less time with my two children.

Q2. Who or what helps you the most?

S02: My wife understands my situation and takes care of the children when I have classes. Our principal also allows me to leave early on Saturdays.

Q3. How do you cope when the workload becomes too heavy?

S02: I plan my week carefully. I write my dissertation one section at a time, early in the morning before school starts.

Q4. What would make it easier for teacher-graduate students like you?

S02: A more flexible class schedule would help, especially during grading periods when teachers are busiest.

▼ S03_Masters_Male

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S03: There is never enough time. After school activities and meetings, I only have the night left for my requirements. By Friday I am already exhausted. Buying books and paying fees also take a big part of my salary.

Q2. Who or what helps you the most?

S03: My co-teachers help me by covering some of my duties when I have exams. Our school head also adjusted my schedule this semester.

Q3. How do you cope when the workload becomes too heavy?

S03: I make sure I sleep at least six hours, even when there are deadlines. On Sundays I rest and play basketball to clear my mind.

Q4. What would make it easier for teacher-graduate students like you?

S03: Hybrid classes would save us travel time. The division could also offer financial support for teachers taking graduate studies.

▼ S04_Doctoral_Female

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S04: My time is divided between my classes, my mentoring duties, and my dissertation. I also take care of my elderly mother, so my evenings are not really mine. Sometimes my body just gives up and I get sick. The cost of my data gathering is another worry.

Q2. Who or what helps you the most?

S04: My husband and my children support me. They do the household chores when I have to write.

Q3. How do you cope when the workload becomes too heavy?

S04: I use a planner and set small goals for each week. I also take short naps when I feel very tired.

Q4. What would make it easier for teacher-graduate students like you?

S04: Study leave for teachers who are writing their dissertation would really help. Online consultations with advisers would also save time.

▼ **S05_Masters_Female**

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S05: Time management is my biggest challenge because I am new in teaching and still learning how to prepare my lessons. My salary is not enough for my tuition, so I have to budget very carefully. I also help my parents take care of my younger siblings.

Q2. Who or what helps you the most?

S05: My parents encourage me to finish my degree. My classmates and I have a group chat where we remind each other about deadlines.

Q3. How do you cope when the workload becomes too heavy?

S05: When I feel overwhelmed, I take a break and watch a movie. Rest helps me think clearly again.

Q4. What would make it easier for teacher-graduate students like you?

S05: I hope there will be more scholarships for new teachers who want to continue studying.

▼ **S06_Doctoral_Male**

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S06: As a head teacher, I have many meetings and reports, so time is my biggest problem. I usually work on my dissertation late at night, and the next day I feel tired. I also miss many family events because of my classes.

Q2. Who or what helps you the most?

S06: My fellow doctoral students are my support group. We share articles and check each other's chapters. Our principal lets me use my leave credits for my data gathering.

Q3. How do you cope when the workload becomes too heavy?

S06: I keep a calendar of all my deadlines, and I start my requirements early so I do not rush.

Q4. What would make it easier for teacher-graduate students like you?

S06: Universities could offer more online or weekend classes for working teachers.

The codebook: the 11 tags you will use

Each tag name has a **category**, a **full stop**, then the **code**. For example, `chal.time` means category *chal* (challenges), code *time*. The full stop matters: you will split on it in Excel.

Tag name	Category	Meaning	Use it when...
chal.time	Challenges	Not enough time	The person says there are not enough hours for work, classes and requirements.
chal.fatigue	Challenges	Tiredness	The person describes physical or mental exhaustion, sleepiness, or getting sick.
chal.finance	Challenges	Money problems	The person mentions tuition, fees, books, loans, or other costs.
chal.family	Challenges	Family duties	The person has less time for family, or family responsibilities compete with studies.
sup.family	Support	Help from family	A family member helps, understands, or encourages the person.
sup.peers	Support	Help from classmates or co-teachers	Classmates, co-teachers or fellow students help or support the person.
sup.workplace	Support	Help from the school	The principal or school adjusts schedules, gives permission, or allows leave.
cope.planning	Coping	Planning and scheduling	The person uses schedules, planners, calendars, deadlines, or small goals.
cope.rest	Coping	Rest and recharge	The person rests, sleeps, takes breaks, naps, or does hobbies.
sug.flexibility	Suggestions	Flexible classes	The person suggests online, hybrid, weekend, or more flexible class schedules.
sug.assistance	Suggestions	Financial help or study leave	The person suggests scholarships, financial support, or study leave.

Get the files ready

Put everything for this activity in one folder, so you always know where your files are.

1

Make a folder on your Desktop

1. Go to your Desktop (the screen you see when all windows are closed).
2. Right-click on an empty space. A small menu appears.
3. Point to **New**, then click **Folder**.
4. Type `Taguette-Activity` and press `Enter`.

You should see

A new folder named Taguette-Activity on your Desktop.

If your screen looks different

If you clicked away before typing the name, the folder is called *New folder*. Right-click it, choose **Rename**, and type the name.

2

Download the six transcripts

1. Click each of the six buttons below, one at a time.
2. If your browser asks where to save, choose the **Taguette-Activity** folder on your Desktop.
3. If it does not ask, the files go to your **Downloads** folder. Open File Explorer (the yellow folder icon on the taskbar), click **Downloads**, select the six files, and drag them into Taguette-Activity.

The six download buttons are on the online version:

<https://michaeltup.github.io/Taguette-Excel-Activity/>

You should see

Six files in your Taguette-Activity folder.

3

Check the six file names

1. Open the Taguette-Activity folder.
2. Compare each name with the list below. They must match exactly.

File name	Means
<code>S01_Masters_Female.txt</code>	S01, Master's student, Female

File name	Means
S02_Doctoral_Male.txt	S02, Doctoral student, Male
S03_Masters_Male.txt	S03, Master's student, Male
S04_Doctoral_Female.txt	S04, Doctoral student, Female
S05_Masters_Female.txt	S05, Master's student, Female
S06_Doctoral_Male.txt	S06, Doctoral student, Male

Why this matters. Each name has three parts separated by underscores:

Participant_Program_Sex. Taguette cannot store a person's program or sex anywhere else, so the name carries them. In Part 8, Excel splits the name back into three columns.

If your screen looks different

If a file name ends in (1), you downloaded it twice. Delete the copy with (1).

Start Taguette and create the project

A project holds your transcripts, your tags and your coding together.

4

Open Taguette

1. Click the **Start** button (bottom left of the screen).
2. Type `Taguette` and press `Enter`.
3. Wait. A black window opens first, then your web browser opens by itself.

The Taguette welcome screen. Box: Create a new project.

You should see

A page that says **Welcome!** with two blue choices.

Why this matters. The black window is Taguette itself. **Do not close it** while you work. The browser only shows the screen.

If your screen looks different

If the browser says the page cannot be reached, the black window was closed. Open Taguette again. Do not type the address yourself: Taguette needs a secret code in the address, which it adds automatically.

5

Click Create a new project

1. Click **Create a new project** (red box above).

You should see

A page titled **New project** with two boxes: Name and Description.

6

Type the project name and description, then click Create

1. In box 1 (**Name**), type: `Work and Graduate Studies`

2. In box 2 (**Description**), type a short note about the project. You can copy the one below.
3. Click the blue **Create** button (box 3).

TAQUETTE Home Taguette Guide Single-user mode

-------------	--

You should see

Your project page opens.

7

Learn the three tabs

1. Look at the left side. There are three tabs: **Project info**, **Documents** and **Highlights**.

TAQUETTE Home Work and Graduate Studies Taguette Guide Single-user mode

Project info Documents Highlights

Add a document

There are no documents in this project yet.

Backlight

Load a document on the left

Taguette 1.4.1 is released under a [BSD-3-Clause license](#), © Rémi Rampin and Taguette contributors | [User Documentation](#) | Please report issues via [GitLab](#) or hi@taguette.org!

A new, empty project. The Highlights tab (box) is where tags live.

You should see

An empty project: no documents yet.

Why this matters. **Documents** holds your transcripts. **Highlights** holds your tags and coded passages. **Project info** is where you export and back up.

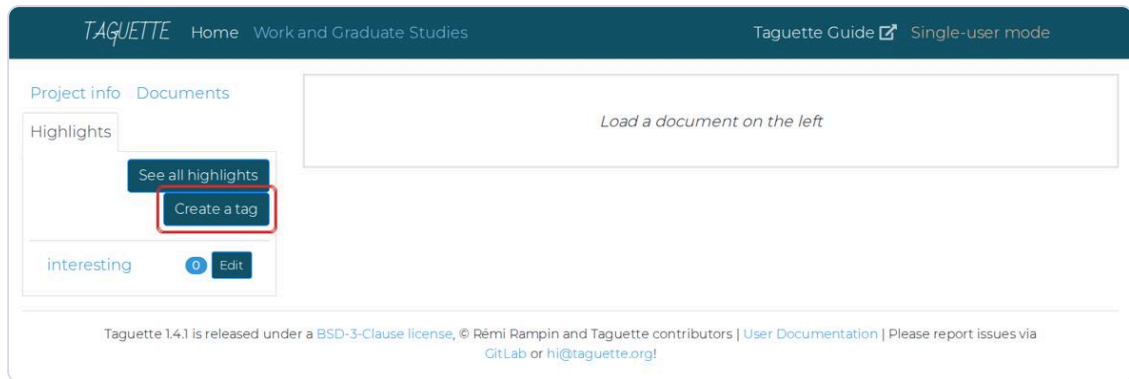

Create the tags

You will type the 11 tags from the codebook. Creating them first means you choose from a list while coding, instead of inventing names.

8

Open the Highlights tab

1. Click **Highlights** on the left (the boxed tab in the last picture).

The Highlights tab. Box: Create a tag. Taguette starts with one tag called interesting.

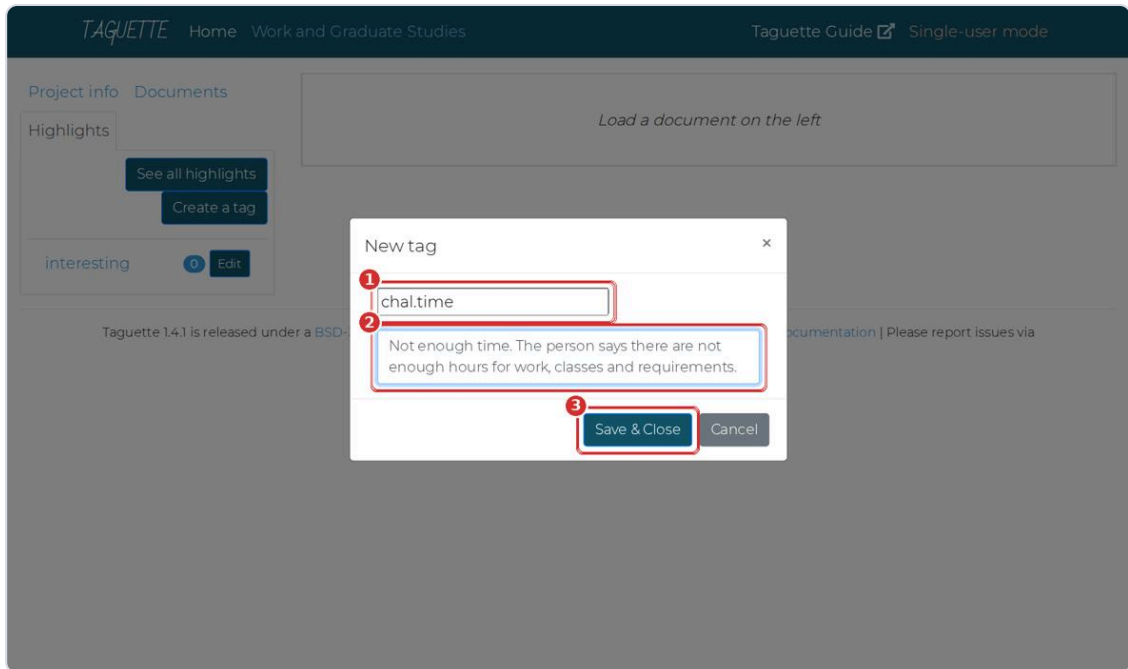

You should see

One tag called **interesting**, and the buttons **See all highlights** and **Create a tag**.

9

Create your first tag

1. Click **Create a tag**.
2. In box 1, type the tag name: `chal.time`
3. In box 2, type its meaning. Copy it from the table in the next step.
4. Click **Save & Close** (box 3).

The New tag window. 1 Tag name. 2 Meaning. 3 Save & Close.

You should see

The window closes and **chal.time** appears in the list.

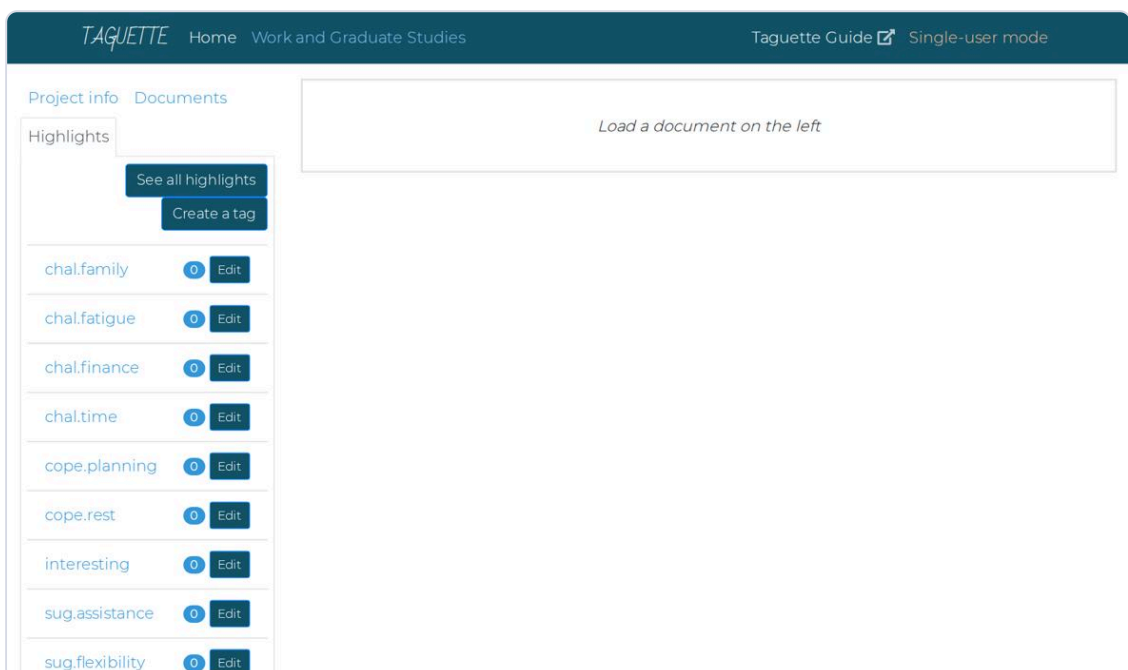

If your screen looks different

Type the tag name in small letters, with one full stop and no spaces. `Chal. Time` is wrong; `chal.time` is right.

10

Create the other 10 tags

1. Repeat Step 9 for every tag below. Use the Copy buttons, then paste with `Ctrl + V`.

After creating all tags. They are listed in alphabetical order. Each tag shows a count (now 0) and an Edit button.

chal.time	chal.time
-----------	-----------

Meaning:

Not enough time. The person says there are not enough hours for work, classes and requirements.

chal.fatigue	chal.fatigue
--------------	--------------

Meaning: Tiredness. The person describes physical or mental exhaustion, sleepiness, or getting sick.

chal.finance	chal.finance
--------------	--------------

Meaning: Money problems. The person mentions tuition, fees, books, loans, or other costs.

chal.family	chal.family
-------------	-------------

Meaning:

Family duties. The person has less time for family, or family responsibilities compete with studies.

sup.family	sup.family
------------	------------

Meaning: Help from family. A family member helps, understands, or encourages the person.

sup.peers	sup.peers
-----------	-----------

Meaning:

Help from classmates or co-teachers. Classmates, co-teachers or fellow students help or support the person.

sup.workplace	sup.workplace
---------------	---------------

Meaning:

Help from the school. The principal or school adjusts schedules, gives permission, or allows leave.

cope.planning	cope.planning
---------------	---------------

Meaning:

Planning and scheduling. The person uses schedules, planners, calendars, deadlines, or small goals.

cope.rest	cope.rest
-----------	-----------

Meaning: Rest and recharge. The person rests, sleeps, takes breaks, naps, or does hobbies.

sug.flexibility	sug.flexibility
-----------------	-----------------

Meaning: Flexible classes. The person suggests online, hybrid, weekend, or more flexible class schedules.

sug.assistance	sug.assistance
----------------	----------------

Meaning:

Financial help or study leave. The person suggests scholarships, financial support, or study leave.

You should see

12 tags in the list: your 11, plus **interesting**. Each shows the number 0.

11

Delete the tag called interesting

1. Click the **Edit** button beside **interesting**.
2. In the window that opens, click the red **Delete tag** button.
3. If the browser asks *Are you sure?*, click **OK**.

You should see

Exactly 11 tags remain.

Why this matters. It is not part of the codebook. If you leave it, someone may use it by accident, and it will appear in your exports.

Import the transcripts

Importing copies each transcript into Taguette. Your original files are not changed.

The most important box in this activity

When you import, you must type the document name yourself, exactly like the file name but **without .txt**. If you leave the Name box empty, Taguette names the document `S01_Masters_Female.txt`. In Excel, the Sex column would then say **Female.txt**, and your counts would be wrong.

12

Open the Add a document window

1. Click the **Documents** tab.
2. Click the blue **Add a document** button.

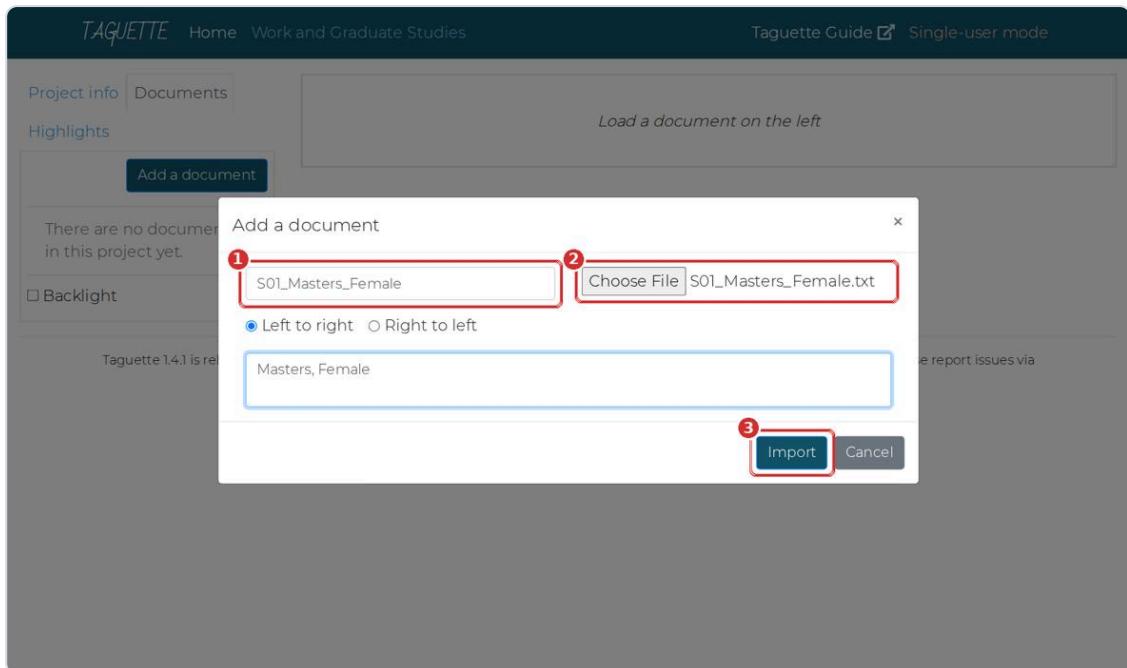

You should see

A window titled **Add a document**.

13

Choose the file

1. Click **Choose File** (box 2 in the picture below).
2. A window opens. Click **Desktop** on the left, then open **Taguette-Activity**.
3. Click **S01_Masters_Female.txt**, then click **Open**.

The Add a document window. 1 Name (type it). 2 Choose File. 3 Import.

You should see

The file name appears beside Choose File.

14

Type the name, then click Import

1. Click in box 1 and type: `S01_Masters_Female` (no .txt).
2. In the large box below, you may type `Masters, Female`. This is optional.
3. Click **Import** (box 3). Wait a few seconds.

You should see

The window closes. **S01_Masters_Female** appears in the list on the left.

If your screen looks different

If an error appears, check that the black Taguette window is still open. Then try again.

15

Import the other five

1. Repeat Steps 12 to 14 for S02 to S06. Type each name carefully.

Code the transcripts

Coding means selecting a statement and attaching a tag to it. You will repeat four actions: select, click, tick, save.

16

Open the first transcript and read it

1. Click **S01_Masters_Female** in the list.
2. Read the whole transcript once before you highlight anything.

The screenshot shows the Taguette web application interface. On the left, there is a sidebar with a 'Documents' tab. Under 'Highlights', a list of documents is shown: 'S01_Masters_Female' (highlighted with a red box), 'S02_Doctoral_Male', 'S03_Masters_Male', 'S04_Doctoral_Female', 'S05_Masters_Female', and 'S06_Doctoral_Male'. Each document has an 'Edit' button. Below the list is a 'Backlight' checkbox. On the right, the main content area displays the transcript for 'S01_Masters_Female'. The transcript title is 'INTERVIEW TRANSCRIPT - S01'. Below the title, it lists metadata: 'Program: Master's | Sex: Female | Age: 26 | Position: Grade 4 teacher'. The main text of the transcript includes a title 'Balancing Work and Graduate Studies: Experiences of Teacher-Graduate Students', a subtitle 'PRACTICE DATA - hypothetical participants for the TEM 603 Taguette activity', and four questions (Q1-Q4) with corresponding answers (S01). The first answer (S01) is: 'Time is my biggest problem. I teach the whole day, then I travel to the university for my evening classes, and I still have lesson plans to finish. Sometimes I am so tired that I fall asleep while reading my assignments. Paying for my tuition is also hard because I am still paying my first loan.'

S01 opened. The transcript appears on the right.

Why this matters. Reading first helps you code consistently. If you start tagging from the first line, you tend to tag the first transcript more heavily than the last.

17

Select the first statement

1. Find this sentence in the Q1 answer: *Time is my biggest problem.*
2. Put the mouse just before **Time**. Hold the left button down, drag to the full stop after **problem**, and let go.
3. A small button **new highlight** appears under your selection (box).

INTERVIEW TRANSCRIPT - S01

Program: Master's | Sex: Female | Age: 26 | Position: Grade 4 teacher

Balancing Work and Graduate Studies: Experiences of Teacher-Graduate Students

PRACTICE DATA - hypothetical participants for the TEM 603 Taguette activity

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S01: Time is my biggest problem. I teach the whole day, then I travel to the university for my evening classes, and I still have lesson plans to finish. Sometimes I am so tired that I fall asleep while reading my assignments. Paying for my tuition cause I am still paying my first loan.

Q2. Who or what helps you the most?

S01: My mother helps me a lot. She cooks for me and reminds me to eat. My classmates also share their notes when I miss a class.

Q3. How do you cope when the workload becomes too heavy?

S01: I make a weekly schedule every Sunday. I write my deadlines in a notebook so I do not forget anything.

Q4. What would make it easier for teacher-graduate students like you?

S01: It would help if some classes were online, so we do not need to travel after work. A scholarship for young teachers would also be a big help.

The selected sentence turns blue. The new highlight button appears below it.

If your screen looks different

No button? You probably clicked instead of dragging. Try again, holding the mouse button down while you move. Tip: after selecting, you can also press the **N** key.

18

Click new highlight, tick the tag, save

1. Click **new highlight**.
2. In the window titled **Highlight**, tick **chal.time** (box 1).
3. Click **Save & Close** (box 2).

INTERVIEW TRANSCRIPT - S01

Program: Master's | Sex: Female | Age: 26 | Position: Grade 4 teacher

Balancing Work and Graduate Studies: Experiences of Teacher-Graduate Students

PRACTICE DATA - hypothetical participants for the TEM 603 Taguette activity

Q1. What is your biggest challenge in balancing your teaching job and your graduate studies?

S01: Time is my biggest problem. I teach the whole day, then I travel to the university for my evening classes, and I still have lesson plans to finish. Sometimes I am so tired that I fall asleep while reading my assignments. Paying for my tuition cause I am still paying my first loan.

Q2. Who or what helps you the most?

S01: My mother helps me a lot. She cooks for me and reminds me to eat. My classmates also share their notes when I miss a class.

Q3. How do you cope when the workload becomes too heavy?

S01: I make a weekly schedule every Sunday. I write my deadlines in a notebook so I do not forget anything.

Q4. What would make it easier for teacher-graduate students like you?

S01: It would help if some classes were online, so we do not need to travel after work. A scholarship for young teachers would also be a big help.

Highlight

☐ chal.family

☐ chal.fatigue

☒ chal.finance

☒ chal.time

☐ cope.planning

☐ cope.rest

☐ interesting

☐ sug.assistance

☐ sug.flexibility

☐ sup.family

☐ sup.peers

☐ sup.workplace

Create a tag

Save & Close Delete highlight

The Highlight window lists all your tags. 1 Tick the right tag. 2 Save & Close.

20

Code S02 to S06

1. Click each transcript in turn and repeat the same actions.
2. Use the codebook in Part 1 when you are unsure.

You should see

Yellow statements in all six transcripts. 45 highlights in total.

21

Check your counts

1. Click the **Highlights** tab.
2. Each tag shows a number beside it. Compare with the table.

The screenshot shows the Taguette interface with the 'Highlights' tab selected. On the left, there is a list of tags with their respective counts and 'Edit' buttons. The counts are: chal.family (4), chal.fatigue (4), chal.finance (4), chal.time (6), cope.planning (4), cope.rest (3), sug.assistance (4), sug.flexibility (5), and sup.family (4). A red box highlights the count '4' for 'chal.family'. On the right, there is a large empty box with the text 'Load a document on the left'.

When coding is finished, each tag shows how many statements carry it (box).

Tag	Expected count
chal.family	4
chal.fatigue	4
chal.finance	4
chal.time	6
cope.planning	4
cope.rest	3
sug.assistance	4
sug.flexibility	5

Tag	Expected count
sup.family	4
sup.peers	4
sup.workplace	3
Total	45

Why this matters. Your numbers may differ by one or two. That is normal: two people rarely code exactly the same. A big difference means you skipped a transcript or used the wrong tag.

If your screen looks different

To fix a highlight, click on the yellow text. The same Highlight window opens: change the tick, or click the red **Delete highlight** button.

22

See every statement under one tag

1. Click a tag name, for example **chal.finance**.

The screenshot shows the Taguette web application interface. On the left, a sidebar lists various tags with their counts and an 'Edit' button. The tag 'chal.finance' is highlighted with a red box. The main area on the right displays four statements, each with a participant name and the 'chal.finance' tag. The statements are:

- Paying for my tuition is also hard because I am still paying my first loan. (S01_Masters_Female)
- Buying books and paying fees also take a big part of my salary. (S03_Masters_Male)
- The cost of my data gathering is another worry. (S04_Doctoral_Female)
- My salary is not enough for my tuition, so I have to budget very carefully. (S05_Masters_Female)

Clicking **chal.finance** shows every statement with that tag, from all transcripts, with the participant name under each.

You should see

Four statements about money, from four different people, on one screen.

Why this matters. This is the main reason to use Taguette: finding all similar statements in one click, instead of re-reading every transcript.

Find statements you have not coded

1. Open any transcript in the Documents tab.
2. Tick **Backlight** (bottom left, under the document list).

The screenshot shows the Taguette web application interface. At the top, there's a navigation bar with 'TAGUETTE', 'Home', 'Work and Graduate Studies', 'Taguette Guide', and 'Single-user mode'. On the left, there's a sidebar with 'Project info', 'Documents', and 'Highlights' tabs. Under 'Documents', there's a list of documents: 'S01_Masters_Female', 'S02_Doctoral_Male', 'S03_Masters_Male', 'S04_Doctoral_Female', 'S05_Masters_Female', and 'S06_Doctoral_Male'. Each document has an 'Edit' button. At the bottom of this list is a checkbox labeled 'Backlight', which is currently unchecked. The main area displays the content of 'S04_Doctoral_Female', titled 'Interview Transcript - S04'. It shows a list of questions (Q1, Q2, Q3, Q4) and their corresponding answers (S04). The text is color-coded: highlights are in yellow, and uncoded text is in grey. The 'Backlight' feature is highlighted with a red box in the sidebar.

With Backlight on, uncoded text turns grey and only your highlights stand out.

You should see

Your highlights stay bright. Everything else turns grey, so missed statements are easy to spot.

Export your work

Taguette cannot count or make tables. You export the coded statements to Excel for that.

24 Open See all highlights

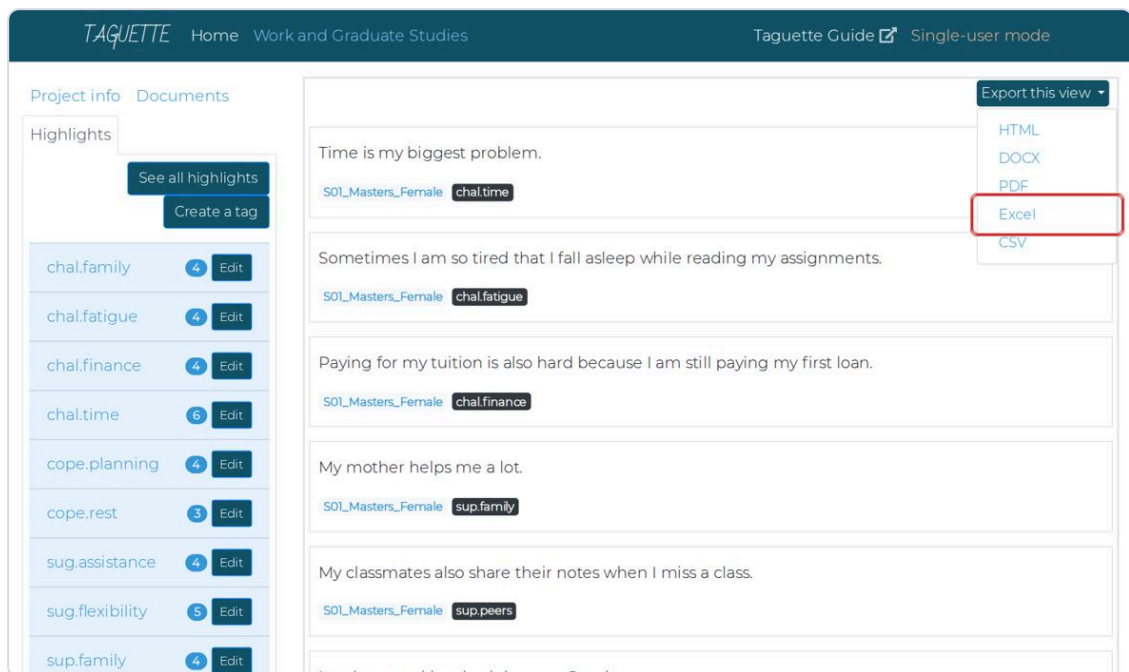

1. Click the **Highlights** tab.
2. Click **See all highlights**.

You should see

A long list of all 45 coded statements.

25 Export to Excel

1. Click **Export this view** (top right).
2. Click **Excel** (box).
3. If your browser asks where to save, choose your **Taguette-Activity** folder. Otherwise the file goes to **Downloads**: move it into your folder.

Export this view, then Excel.

You should see

An Excel file in your folder. Its name begins with *highlights*.

26 Back up the whole project

1. Click the **Project info** tab.

2. Click **Export project** (box). Save the file in your folder.

The screenshot shows the Taguette web application interface. At the top, there's a dark blue header with the Taguette logo and navigation links: Home, Work and Graduate Studies, Taguette Guide, and Single-user mode. Below the header, there's a sidebar on the left with tabs for 'Project info' and 'Documents'. Under 'Project info', there's a 'Highlights' section with a form containing fields for 'Name' (filled with 'Work and Graduate Studies'), 'Description' (filled with 'Practice activity: balancing teaching work and graduate'), and a list of actions: 'Export project' (highlighted with a red box), 'Export codebook', 'Import codebook', and 'Delete project'. The main content area on the right displays an 'Interview Transcript - S04' for a 'Program: Doctoral | Sex: Female'. It contains four questions (Q1-Q4) and their corresponding answers (S04). Several parts of the text are highlighted in yellow, indicating coding or tagging. A small 'Export this view' button is visible in the top right corner of the main content area.

Project info: Export project saves your whole project in one file.

You should see

A file ending in **.sqlite3** in your folder. This file is also what you submit.

Why this matters. This one file holds your documents, tags and coding. You can open it again on any computer: on the Taguette welcome page, choose **Import a project file**.

27

Close Taguette properly

1. Close the browser tab first.
2. Then close the black Taguette window.

Why this matters. Closing only the browser tab leaves Taguette running in the background.

Stuck in Taguette?

You can still do Parts 8 to 10. Download the ready-made export and continue with it. The download button is on the online version of this activity.

Prepare the data in Excel

You will split the document name and the tag into separate columns. This is called delimiting: cutting text wherever a chosen character appears.

28

Open the exported file and save a copy

1. Double-click the exported Excel file in your folder.
2. If a yellow bar says **Enable Editing**, click it.
3. Click **File**, then **Save As**. Choose your folder, name it `Activity-YourName` , and choose the type **Excel Workbook (*.xlsx)**. Click **Save**.

	A	B	C	D
1	id	document	tag	content
2	1	S01_Masters_Female	chal.time	Time is my biggest problem.
3	2	S01_Masters_Female	chal.fatigue	Sometimes I am so tired...

You should see

The file is open with four columns: id, document, tag, content.

29**Make room for the split: insert two empty columns after document**

1. Right-click the letter **C** at the top of column C.
2. Click **Insert**.
3. Do it once more: right-click **C** again, click **Insert**.

Diagram, not a screenshot. Right-click the column letter C, then Insert.

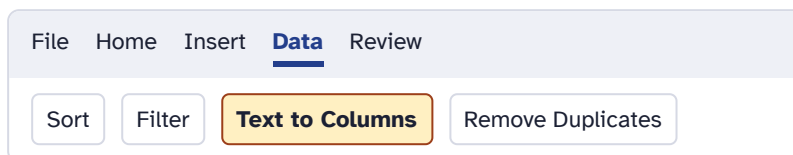

You should see

Two empty columns, C and D. The tag column has moved to E.

Why this matters. Splitting B into three pieces needs two empty columns to its right. Without them, Excel would write over the tag column.

30**Select column B and open Text to Columns**

1. Click the letter **B** at the top. The whole column turns grey.
2. Click the **Data** tab at the top of Excel.
3. Click **Text to Columns**.

Diagram, not a screenshot. Data tab, then Text to Columns.

You should see

A window called **Convert Text to Columns Wizard – Step 1 of 3**.

31**Step 1 of the wizard: choose Delimited**

1. Click **Delimited**.
2. Click **Next**.

Convert Text to Columns Wizard - Step 1 of 3

☒ **Delimited** - characters such as commas or tabs separate each field

☐ Fixed width

Cancel Next >

Diagram, not a screenshot.

Why this matters. *Delimited* means: cut wherever a certain character appears. Our names are cut at the underscore.

32

Step 2 of the wizard: split at the underscore, then Finish

1. Untick **Tab**.
2. Tick **Other**.
3. In the small box beside Other, type an underscore: Shift + - gives _
4. Look at the preview at the bottom: you should see three columns.
5. Click **Finish**.

Convert Text to Columns Wizard - Step 2 of 3

Delimiters

☐ Tab ☐ Semicolon ☐ Comma ☐ Space

☒ **Other:** _

document		
S01	Masters	Female
S02	Doctoral	Male

Cancel < Back Finish

Diagram, not a screenshot. Other is ticked with an underscore; the preview shows three columns.

You should see

Column B now shows S01, column C Masters or Doctoral, column D Female or Male.

If your screen looks different

If Excel asks *There's already data here. Do you want to replace it?*, click **Cancel**. You did not insert two empty columns. Go back to Step 29.

33**Rename the three headings**

1. Click cell **B1**, type `Participant`, press `Enter`.
2. Click **C1**, type `Program`, press `Enter`.
3. Click **D1**, type `Sex`, press `Enter`.

You should see

Headings: id, Participant, Program, Sex, tag, content.

34**Check for the .txt problem**

1. Look down column D (Sex).
2. If any cell says **Female.txt** or **Male.txt**, fix it: click the letter **D**, press `Ctrl + H`.
3. In **Find what**, type `.txt`. Leave **Replace with** empty. Click **Replace All**, then **Close**.

You should see

Column D shows only Female and Male.

Why this matters. This happens when a document was imported with the Name box left empty (Part 5). If you leave it, Excel counts *Female* and *Female.txt* as two different groups.

35**Split the tag at the full stop**

1. Right-click the letter **F** and click **Insert**. (One empty column is enough: the tag splits into two.)
2. Click the letter **E** (the tag column).
3. **Data** tab, **Text to Columns, Delimited, Next**.
4. Untick everything, tick **Other**, type a full stop `.` in its box, click **Finish**.
5. Rename **E1** to `Category` and **F1** to `Code`.

You should see

Column E shows chal, sup, cope or sug. Column F shows time, family, peers, and so on.

36**Turn the data into a Table**

1. Click any cell with data, for example B2.
2. Press `Ctrl + T`. A small window appears; make sure **My table has headers** is ticked. Click **OK**.
3. Save the file: `Ctrl + S`.

Your first rows should now look like this:

id	Participant	Program	Sex	Category	Code	content
1	S01	Masters	Female	chal	time	Time is my biggest problem.
2	S01	Masters	Female	chal	fatigue	Sometimes I am so tired that I fall asleep...
3	S01	Masters	Female	chal	finance	Paying for my tuition is also hard because...
4	S01	Masters	Female	sup	family	My mother helps me a lot.
5	S01	Masters	Female	sup	peers	My classmates also share their notes when ...

You should see

Colored stripes and small arrow buttons on the headings. 45 rows of data.

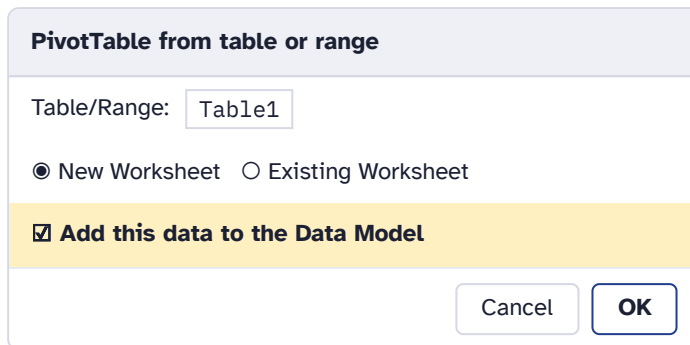

Why this matters. A Table keeps all your rows together, so the PivotTable in the next part picks up everything automatically.

Make the PivotTables

A PivotTable counts rows for you. You choose what to group by, and Excel builds the table in a second.

37 Insert a PivotTable, and tick the Data Model box

1. Click any cell inside your Table.
2. Click the **Insert** tab, then **PivotTable**. In newer Excel, click **From Table/Range**.
3. Leave **New Worksheet** selected.
4. Tick **Add this data to the Data Model**. Then click **OK**.

PivotTable from table or range

Table/Range:

☒ New Worksheet ☐ Existing Worksheet

☒ **Add this data to the Data Model**

Diagram, not a screenshot. The ticked box allows counting different people in Step 40.

You should see

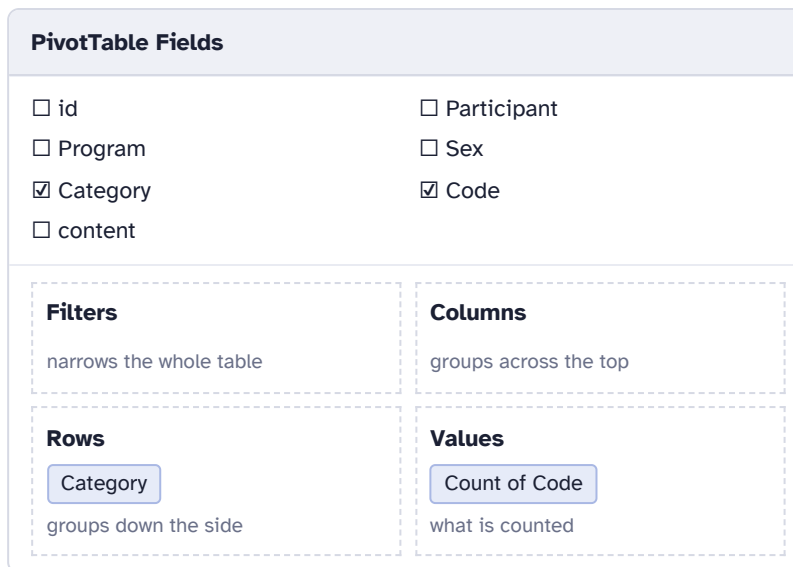

A new sheet with an empty PivotTable on the left and a panel called **PivotTable Fields** on the right.

If your screen looks different

No Data Model box? You may be using Excel for Mac or Excel online. Continue anyway; Step 40 explains what to do.

38 Learn the PivotTable Fields panel

1. At the top of the panel are your column names.
2. At the bottom are four boxes: **Filters**, **Columns**, **Rows**, **Values**.

Diagram, not a screenshot. This is the setup for the next step.

Why this matters. Every PivotTable is just a choice of what goes into these four boxes.

39 Count statements per category

1. Point at **Category**, hold the mouse button, drag it into the **Rows** box, let go.
2. Drag **Code** into the **Values** box.

Row Labels	Count of Code
chal	18
cope	7
sug	9
sup	11
Grand Total	45

You should see

Four categories with their counts. Challenges is the largest with 18.

Why this matters. The count is the number of coded statements, not the number of people. One person can say two challenges.

40 Count people instead of statements

1. Drag **Participant** into **Values**, below Count of Code.
2. Click the small arrow on **Count of Participant**, then **Value Field Settings**.
3. Scroll the list and choose **Distinct Count**. Click **OK**.

Value Field Settings

Summarize value field by

Sum

Count

Average

Max

Min

Distinct Count

Cancel

OK

Diagram, not a screenshot. Distinct Count is at the bottom of the list.

Row Labels	Count of Code	Distinct Count of Participant
chal	18	6
cope	7	6
sug	9	6
sup	11	6
Grand Total	45	6

You should see

Every category shows **6** people: all six participants said something in every category.

Why this matters. This is the difference between *how much was said* (18 challenge statements) and *how many people said it* (6). In research writing, report the people first.

If your screen looks different

If Distinct Count is missing, the Data Model box was not ticked in Step 37. Make the PivotTable again and tick it. On Mac or Excel online, skip this step: in this practice data each person has each **code** at most once, so at code level, Count of Code already equals the number of people.

41 Open each category into its codes

1. Remove Distinct Count of Participant: drag it out of the Values box back to the list.
2. Drag **Code** into the **Rows** box, below Category.

Row Labels	Count of Code
chal	18

Row Labels	Count of Code
family	4
fatigue	4
finance	4
time	6
cope	7
planning	4
rest	3
sug	9
assistance	4
flexibility	5
sup	11
family	4
peers	4
workplace	3
Grand Total	45

You should see

Each category with its codes listed under it. **time** has 6: every participant said they lack time.

Why this matters. Click the small minus sign beside a category to hide its codes, and the plus sign to show them again.

42

Compare Master's and Doctoral students

1. Drag **Program** into the **Columns** box.

Row Labels	Doctoral	Masters
chal	9	9
family	3	1
fatigue	2	2
finance	1	3

Row Labels	Doctoral	Masters
time	3	3
cope	4	3
planning	3	1
rest	1	2
sug	4	5
assistance	1	3
flexibility	3	2
sup	5	6
family	2	2
peers	1	3
workplace	2	1

You should see

Two columns of numbers, one per program. Excel puts them in alphabetical order: Doctoral first, then Masters.

Why this matters. Look at **chal** first: 9 and 9, no difference. Now look inside it: **finance** is Doctoral 1, Masters 3, but **family** is Doctoral 3, Masters 1. The difference was hidden inside the category. That is why you opened the codes in the last step.

43

Filter by sex

1. Drag **Sex** into the **Filters** box.
2. Above the PivotTable, click the small arrow beside **(All)**. Choose **Female**, click **OK**.
3. Look at the numbers, then set it back to **(All)**.

You should see

The table shows only the three female participants, then all six again.

44

See the actual statements behind a number

1. Find the row **finance** under the **Masters** column. It shows **3**.
2. Double-click that 3.

You should see

Excel opens a new sheet with the 3 statements behind that number, with their content.

Why this matters. Every number in a PivotTable is made of real statements. Use this to find quotes for your report. Delete the extra sheet afterwards: right-click its tab, then Delete.

45

Optional: make a chart

1. Click inside the PivotTable.
2. Click the **PivotTable Analyze** tab (or **Analyze**), then **PivotChart**.
3. Choose **Clustered Column**, click **OK**.

You should see

A bar chart that changes whenever you change the PivotTable.

46

Check your PivotTable with the one on this page

1. Use the practice PivotTable below. Choose the same Rows, Columns and Values you used in Excel.
2. Your numbers should match. If they differ by one or two, it is your coding, which is normal.

Rows	Columns	Values
Category ▼	(none) ▼	Count of Code ▼
Filter: Sex		
(All) ▼		
Row Labels	Count of Code	
chal	18	
cope	7	
sug	9	
sup	11	
Grand Total	45	

Interpret the results

Numbers are not findings. A finding is a sentence that explains what the numbers mean, honestly.

47

Answer five questions from your PivotTables

1. Write your answers on paper or in a new Excel sheet.

1. Which challenge did every participant mention?
2. Which challenge was mentioned more by Master's students?
3. Which challenge was mentioned more by Doctoral students?
4. Which support did Master's students rely on more?
5. Which coping strategy did Doctoral students use more?

▼ Show the answers

1. Lack of time (chal.time): 6 of 6.
2. Money problems (finance): 3 of 3 Master's, 1 of 3 Doctoral.
3. Family duties (family): 3 of 3 Doctoral, 1 of 3 Master's.
4. Classmates or co-teachers (peers): 3 of 3 Master's, 1 of 3 Doctoral.
5. Planning and scheduling: 3 of 3 Doctoral, 1 of 3 Master's.

48

Write a short interpretation

1. Write three to five sentences about what you found. Use the starter sentences below if you like.

Starter sentences

All six participants ...

Among the Master's students, ... while among the Doctoral students, ...

This may be because ...

However, with only three participants in each group, ...

Why this matters. Two rules. **Write the people, not percentages:** say *three of the three*, not 100%, because 100% of three people sounds like a survey. **Do not generalize:** six hypothetical participants describe only themselves.

49

Compare with a model answer

1. Read yours first, then open the model.

▼ Show a model interpretation

All six participants described a lack of time as their main challenge in balancing teaching and graduate studies. The other challenges differed by program. All three Master's students mentioned money problems such as tuition and fees, and they relied more on classmates and co-teachers for support. All three Doctoral students mentioned family duties, and they coped mainly through careful planning. This may reflect their stage of life: the Master's students were younger and earlier in their careers, while the Doctoral students were older with more family responsibilities. However, with only three participants in each group, these patterns describe these six teachers only and cannot be generalized.

Submit your work

Check everything before you send it.

Submit this	File
Your Taguette project	The .sqlite3 file from Step 26
Your Excel workbook	Activity-YourName.xlsx with the split columns and at least one PivotTable
Your interpretation	Three to five sentences, in the workbook or a short document

How it will be checked

What	Points	Full points when...
Project and tags	15	Project created; 11 tags with exact names; interesting deleted
Import and naming	15	Six documents named exactly Participant_Program_Sex, without .txt
Coding	25	About 45 highlights; each one a statement, not a whole answer; tags fit the codebook
Delimiting in Excel	15	Participant, Program, Sex, Category and Code in separate columns
PivotTables	20	Category and Code counts; Program comparison; Distinct Count or an explanation why not
Interpretation	10	Clear, honest, uses numbers of people, does not generalize
Total	100	

Help and answer keys

Problems people actually run into, and the full coding key.

Problem	What to do
The browser shows <i>secret token</i> or cannot reach the page	The black Taguette window was closed, or you typed the address. Close everything and open Taguette from the Start menu.
Taguette shows an error when importing	Check that the file ends in .txt and that the black window is open. Try again.
A document has the wrong name	Documents tab, click Edit beside it, correct the name, save.
I tagged a statement with the wrong tag	Click the yellow text, untick the wrong tag, tick the right one, Save & Close.
No new highlight button appears	Drag to select (do not just click). Or select, then press the N key.
Excel asks to replace data during Text to Columns	Cancel. Insert enough empty columns to the right first (Step 29).
Sex column shows Female.txt	Select the column, Ctrl+H, find .txt, replace with nothing, Replace All (Step 34).
No Distinct Count in Value Field Settings	The Data Model box was not ticked. Make the PivotTable again (Step 37).
The PivotTable does not show new rows	Click inside it, then PivotTable Analyze, Refresh.

▼ Show the full coding key (45 statements)

Participant	Question	Statement to highlight	Tag
S01	Q1	Time is my biggest problem.	chal.time
S01	Q1	Sometimes I am so tired that I fall asleep while reading my assignments.	chal.fatigue
S01	Q1	Paying for my tuition is also hard because I am still paying my first loan.	chal.finance
S01	Q2	My mother helps me a lot.	sup.family
S01	Q2	My classmates also share their notes when I miss a class.	sup.peers
S01	Q3	I make a weekly schedule every Sunday.	cope.planning
S01	Q4	It would help if some classes were online, so we do not need to travel after work.	sug.flexibility

Participant	Question	Statement to highlight	Tag
S01	Q4	A scholarship for young teachers would also be a big help.	sug.assistance
S02	Q1	Between teaching, checking papers, and writing my dissertation, the hours are never enough.	chal.time
S02	Q1	I also feel guilty because I spend less time with my two children.	chal.family
S02	Q2	My wife understands my situation and takes care of the children when I have classes.	sup.family
S02	Q2	Our principal also allows me to leave early on Saturdays.	sup.workplace
S02	Q3	I plan my week carefully.	cope.planning
S02	Q4	A more flexible class schedule would help	sug.flexibility
S03	Q1	There is never enough time.	chal.time
S03	Q1	By Friday I am already exhausted.	chal.fatigue
S03	Q1	Buying books and paying fees also take a big part of my salary.	chal.finance
S03	Q2	My co-teachers help me by covering some of my duties when I have exams.	sup.peers
S03	Q2	Our school head also adjusted my schedule this semester.	sup.workplace
S03	Q3	I make sure I sleep at least six hours, even when there are deadlines.	cope.rest
S03	Q4	Hybrid classes would save us travel time.	sug.flexibility
S03	Q4	The division could also offer financial support for teachers taking graduate studies.	sug.assistance
S04	Q1	My time is divided between my classes, my mentoring duties, and my dissertation.	chal.time
S04	Q1	I also take care of my elderly mother, so my evenings are not really mine.	chal.family
S04	Q1	Sometimes my body just gives up and I get sick.	chal.fatigue

Participant	Question	Statement to highlight	Tag
S04	Q1	The cost of my data gathering is another worry.	chal.finance
S04	Q2	My husband and my children support me.	sup.family
S04	Q3	I use a planner and set small goals for each week.	cope.planning
S04	Q3	I also take short naps when I feel very tired.	cope.rest
S04	Q4	Study leave for teachers who are writing their dissertation would really help.	sug.assistance
S04	Q4	Online consultations with advisers would also save time.	sug.flexibility
S05	Q1	Time management is my biggest challenge	chal.time
S05	Q1	My salary is not enough for my tuition, so I have to budget very carefully.	chal.finance
S05	Q1	I also help my parents take care of my younger siblings.	chal.family
S05	Q2	My parents encourage me to finish my degree.	sup.family
S05	Q2	My classmates and I have a group chat where we remind each other about deadlines.	sup.peers
S05	Q3	When I feel overwhelmed, I take a break and watch a movie.	cope.rest
S05	Q4	I hope there will be more scholarships for new teachers who want to continue studying.	sug.assistance
S06	Q1	time is my biggest problem	chal.time
S06	Q1	I usually work on my dissertation late at night, and the next day I feel tired.	chal.fatigue
S06	Q1	I also miss many family events because of my classes.	chal.family
S06	Q2	My fellow doctoral students are my support group.	sup.peers
S06	Q2	Our principal lets me use my leave credits for my data gathering.	sup.workplace
S06	Q3	I keep a calendar of all my deadlines, and I start my requirements early so I do not rush.	cope.planning
S06	Q4	Universities could offer more online or weekend classes for working teachers.	sug.flexibility

TEM 603 Data Management and Analysis. Practice data: all participants and answers are hypothetical, written for this activity. Screenshots are from Taguette 1.4.1.
